# Happitunia® 'Black Cherry'™

*Petunia Hybrids*

## KEY BENEFITS

Happitunia 'Black Cherry' is a show stopper with its masses of dark red flowers which have very dark centres. Planted in sunny garden beds or in garden plantings in pots the plant more than holds its own among mixed flower and shrub gardens. Like all Petunias it is fast growing, well suited to larger pots and bigger hanging baskets. The plant is self-cleaning with the fresh flowers and leaves covering over older ones.

## ORIGIN

'Black Cherry' was bred in Japan by careful selection. In Australia and New Zealand it is marketed as one of the Happitunias series joining others released over the years. Petunias are all inter-related through cross breeding over many years. Hybrid Petunias are so well known they do not need describing. Original species are seldom grown today. All are native of the South Americas.

## USES

'Black Cherry' is ideal for gardeners who like a good show in their garden with minimum effort. The plant needs care as it establishes but once it is growing there is little after care needed to produce a good show of flower. In large pots around the garden, near pools or barbecues, on balconies and on sunny courtyards the plant will give a good show. The use of 'Black Cherry' in mixed plantings is worthwhile but the companion plants must be well rooting and strong growers. Look under care for instructions on ways to prolong the longer life of your plants.

## CARE

'Black Cherry' is an easy plant to grow and maintain. Watering needs are average. When dry, water the plant to keep them looking good. When planting out or potting on in late winter or spring incorporate slow release fertiliser at recommended rates. This will get the plant away to a good start. Once September arrives your plant will be growing well. A soluble high nitrogen fertiliser applied every three or four weeks will keep the plant in top condition. When hand watering make sure that the soil ball is saturated. Around December, when the plants are in full growth, but starting to look a little overgrown, a pruning followed by a new application of slow release fertiliser will result in bushy growth and bursts of vigour giving lots of new flowers. Trim back the longer branches just enough to bring them back in line to the sides of the pots. As the plants grow make sure that you keep the fertiliser up to them.

Another super selection from the team at Proven Winners.
